(54) Title: CREATING A BRIDGE CLIP FOR SEAMLESS CONNECTION OF MULTIMEDIA SECTIONS WITHOUT REQUIRING RECODING

(57) Abstract: The invention concerns a method, devices and a computer program code (10) bridging multimedia stream sections. The method comprises detecting user-selected switching from a first (TS1) to a second section (TS2) at an exit time (USEX) of the first section and an entry time (USEN) of the second section, determining, based on the exit time, an exit location (AEX) having a sequence start marker, selecting all media packets (V₂, A₂) in the first section associated with the start marker and possible media packets (A₁) provided after the exit location associated with previous sequences, creating a sequence end marker (E) for selected packets, determining, based on the entry time, an entry location (AEN) having a sequence start marker, selecting stream control information (SC) provided before the entry location, and creating a bridge clip (BC) comprising copied selected media packets, the sequence end marker, copied selected stream control information and possible filling packets (N).
